

Kuamut is 7 years old. Before her rescue by the sanctuary she was kept as a pet in a small iron cage with two heavy metal chains around her neck. Now Kuamut roams freely around BSBCC and is one of the healthiest bears here. She is quiet and sensitive. You can identify her by the white dot markings on her eyebrows and her wide chest mark with lots of black dots.

## Kuamut

Debbie is 3 years old. She came from the town of Kota Marudu where she was sold to a buyer in Tuaran and eventually brought to BSBCC. In the beginning she was quiet and sad but has since become best friends with Mary. She is strong, active, independent and playful. You can identify Debbie because she is the only bear at the sanctuary with a "Y" shaped chest mark.

## Debbie

Au Bui is 4 years old. Ah Bui was rescued by the Sabah Wildlife Department and sent to the BSBCC before she could be sold illegally for her gall bladder. She is a beautiful and confident bear with many bear friends at the sanctuary. She is gentle, easygoing and a superb climber. You can identify Ah Bui by her chest mark that looks like a necklace.

## Ah Bui

Fulung is 5 years old. At just 2 months of age Fulung was injured by a hunting dog in the wild and then kept as a pet. Nearly a year later Fulung was surrendered to the Sabah Wildlife Department and brought to the Lok Kawi Zoo before being sent to BSBCC. Fulung loves climbing trees, digging, foraging for termites, and playing with his friends. He can be identified by wide and pointy chest mark.

## Fulung

Mary is 3 years old. She was captured by poachers and kept as a house pet before coming to the BSBCC. Under the care of the sanctuary her diet has greatly improved and so has her health. Mary is friends with many of the other bears and is quite playful, although at times she can be a bit grumpy. One way to identify Mary is to look for the bear with a longer face shape than the others.

## Mary

Kudat is 6 years old. Before coming to BSBCC he was housed in a small zoo with another bear named Panda and the zoo displayed them both as "Panda" bears. Kudat loves splashing water in the drinking trough, but doesn't enjoy getting too wet. He can be identified by his large size and his big chest mark.

## Kudat

Tokob is 11 years old. She came to the sanctuary when she was only about 5 months old. Tokob is a sensitive and solitary bear although she likes to play wrestle with Kuamut. Tokob can be identified as the most slender of the female sun bears.
