

This curriculum has been developed by Ruth Habrecht,  
Conservation and Education Specialist and founder of Hutan for WorldHealth.  
With a focus on game-based learning the goals of the material  
are to create an awareness and an appreciation for sun bears, introduce  
the importance of diversity, influence behavior, and encourage  
“radical creativity”, the ability to “think something up”.

To conserve an ecological balance by avoiding depletion of natural resources  
with the goal of ensuring a healthy planet for the well-being of all life, indefinitely.
